AWS Academy Learner Lab [42195]

AWS Academy Learner Lab provides a long-running sandbox environment for ad hoc exploration of AWS services. Within this class, students will have access to **a restricted set of AWS services**. Not all AWS documentation walk-through or sample labs that operate in an AWS Production account will work in the Learner Lab environment. You will retain access to the AWS resources set up in this environment for the duration of this course. We limit your budget (\$100USD), so you should exercise caution to prevent charges that will deplete your budget too quickly. If you exceed your budget, you will lose access to your environment and lose all of your work.

Each session lasts for 4 hours by default, although you can extend a session to run longer by pressing the start button to reset your session timer. At the end of each session, any resources you created will persist. However, we automatically shut EC2 instances down. Other resources, such as RDS instances, keep running. Keep in mind that we do not stop some AWS features, so they can still incur charges between sessions. For example, an Elastic Load Balancer or a NAT. You may

Nothing for now

5. Ikuti langkah gambar-gambar berikut

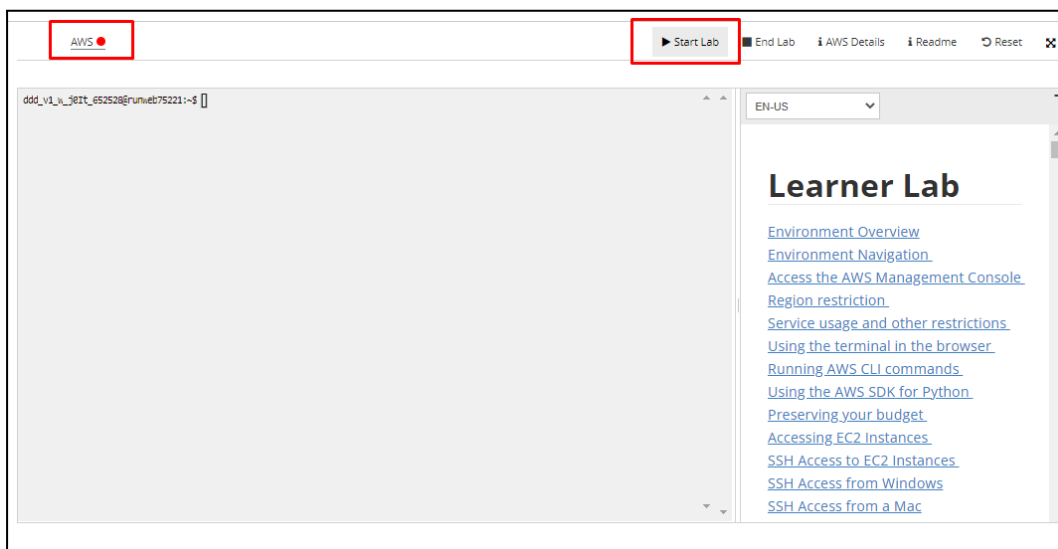

Contact Information

If you have any questions about these Terms or the Services, please contact Vocareum at info@vocareum.com

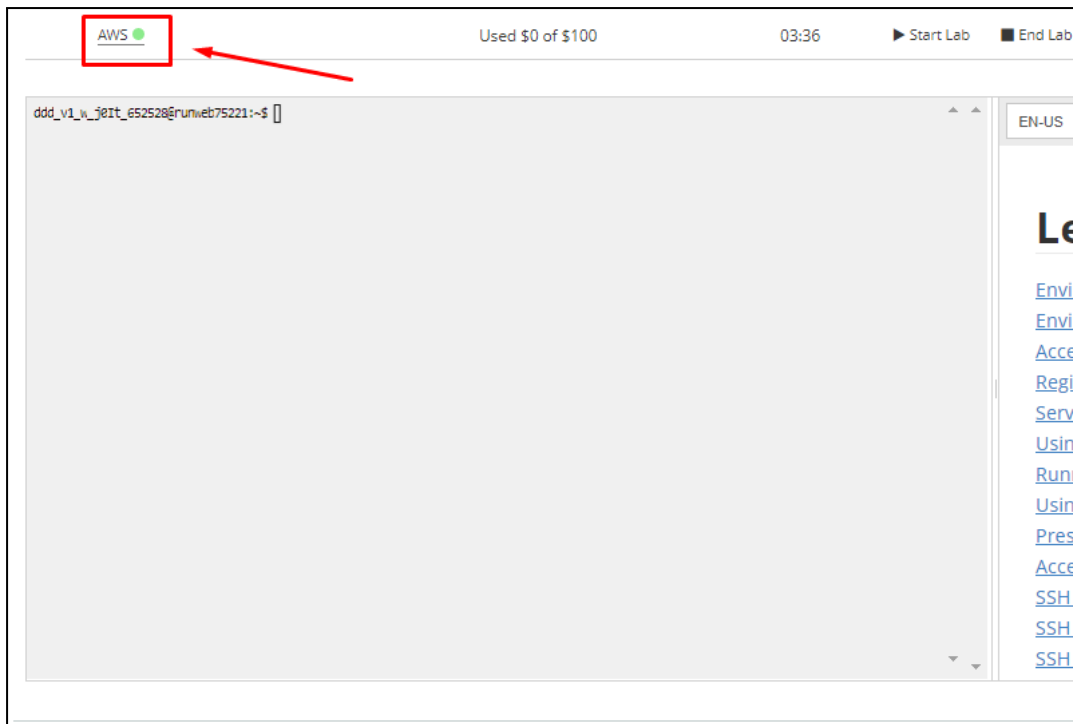

I Agree

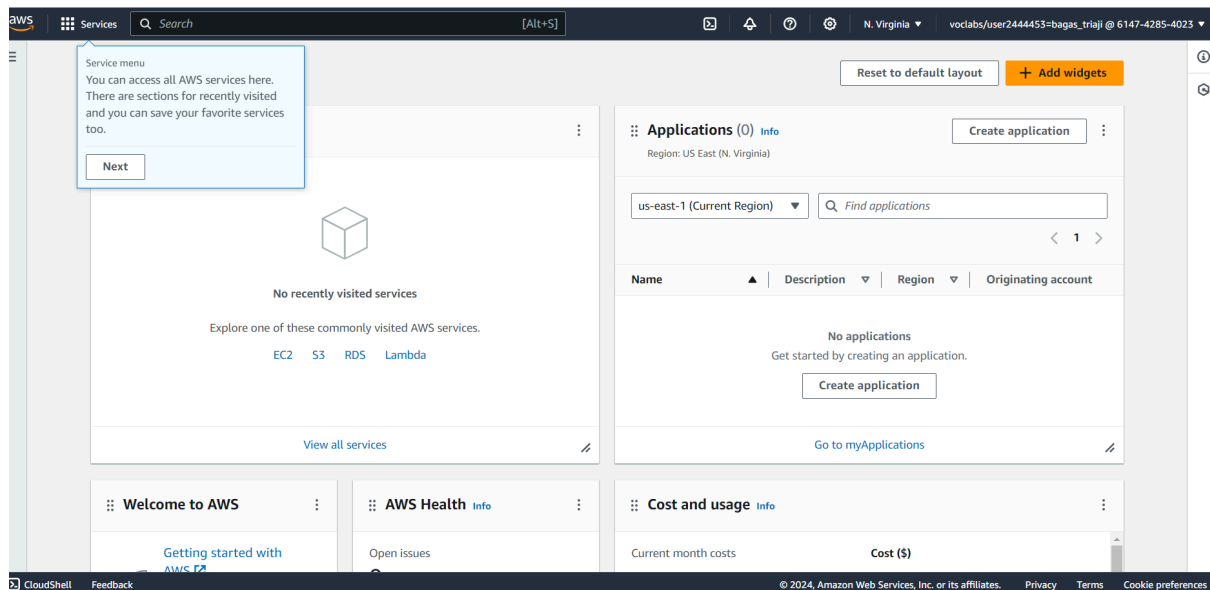

6. Terdapat tulisan AWS dengan lingkaran merah yang berarti Learner lab belum nyala atau tidak aktif. Klik Start Lab untuk mengaktifkan, hingga tulisan AWS ada tanda hijau

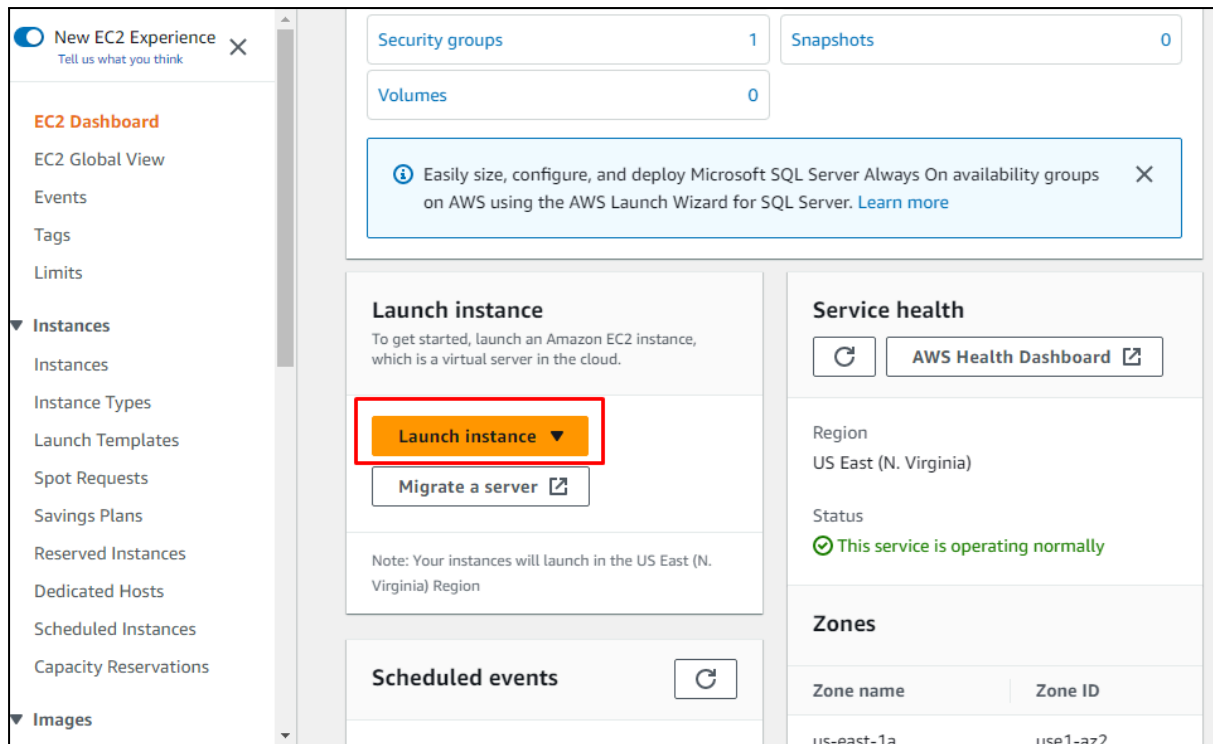

Klik AWS dengan tanda hijau tersebut. Seperti gambar di bawah ini

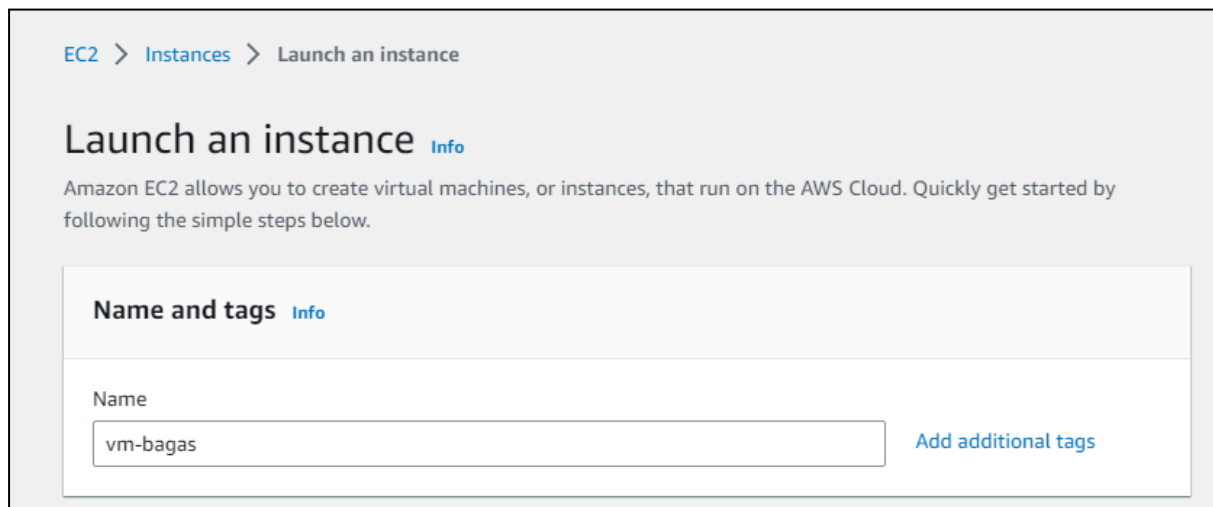

7. Muncul tampilan Console Home dan pilih **EC2**

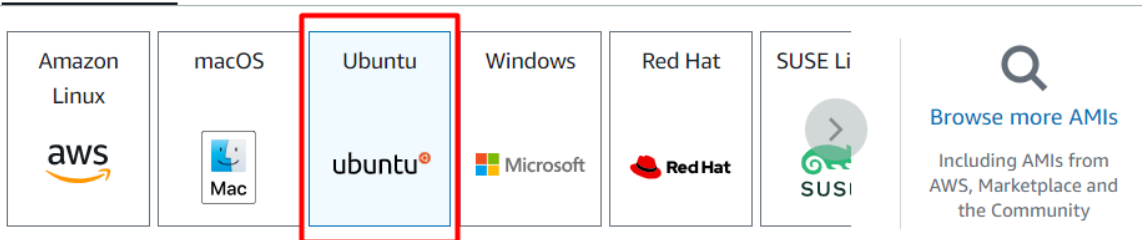

8. Masukkan nama virtual machine anda. bisa mengikuti pola penamaan pada gambar

9. Scroll ke bawah dan pilih Sistem Operasi Ubuntu

Quick Start

Amazon Machine Image (AMI)

Ubuntu Server 24.04 LTS (HVM), SSD Volume Type Free tier eligible

ami-0e86e20dae9224db8 (64-bit (x86)) / ami-096ea6a12ea24a797 (64-bit (Arm))

Virtualization: hvm ENA enabled: true Root device type: ebs

Description

Ubuntu Server 24.04 LTS (HVM),EBS General Purpose (SSD) Volume Type. Support available from Canonical (<http://www.ubuntu.com/cloud/services>).

Architecture

64-bit (x86)

AMI ID

ami-0e86e20dae9224db8

Verified provider

▼ Instance type [Info](#) | [Get advice](#)

Instance type

t3.medium

Family: t3 2 vCPU 4 GiB Memory Current generation: true
On-Demand SUSE base pricing: 0.0979 USD per Hour
On-Demand Windows base pricing: 0.06 USD per Hour
On-Demand Linux base pricing: 0.0416 USD per Hour
On-Demand RHEL base pricing: 0.0704 USD per Hour

☐ All generations

[Compare instance types](#)

Additional costs apply for AMIs with pre-installed software

10. Buat key pair untuk akses SSH melalui putty. Ikuti langkah pada gambar. Apabila berhasil membuat keypair, maka ada file yang otomatis terdownload. Simpan file tersebut dengan aman. contoh file keypair: **keypair-vm-bagas.ppk**

▼ Key pair (login) [Info](#)

You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.

Key pair name - required

Select

Create new key pair

Create key pair

Key pairs allow you to connect to your instance securely.

Enter the name of the key pair below. When prompted, store the private key in a secure and accessible location on your computer. **You will need it later to connect to your instance.** [Learn more](#)

Key pair name

keypair-vm-baga

The name can include upto 255 ASCII characters. It can't include leading or trailing spaces.

Key pair type

☒ RSA
RSA encrypted private and public key pair

☐ ED25519
ED25519 encrypted private and public key pair (Not supported for Windows instances)

Private key file format

☐ .pem
For use with OpenSSH

☒ .ppk
For use with PuTTY

Cancel **Create key pair**

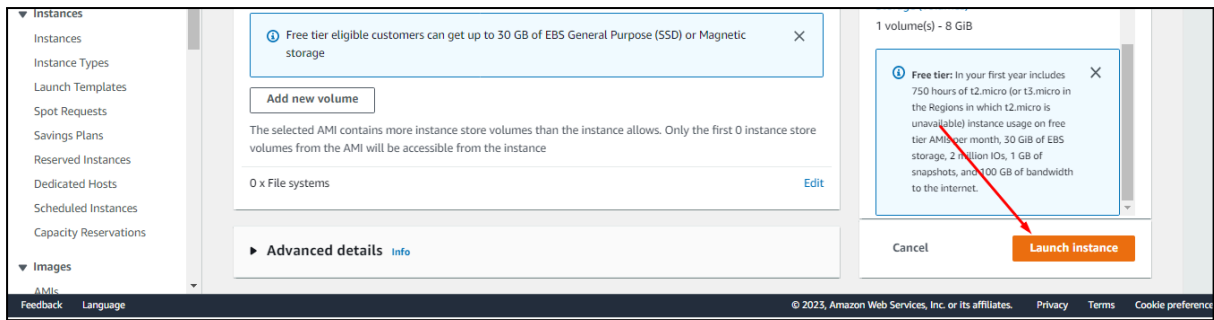

11. Configure storage menjadi 30 GB

▼ Configure storage [Info](#) [Advanced](#)

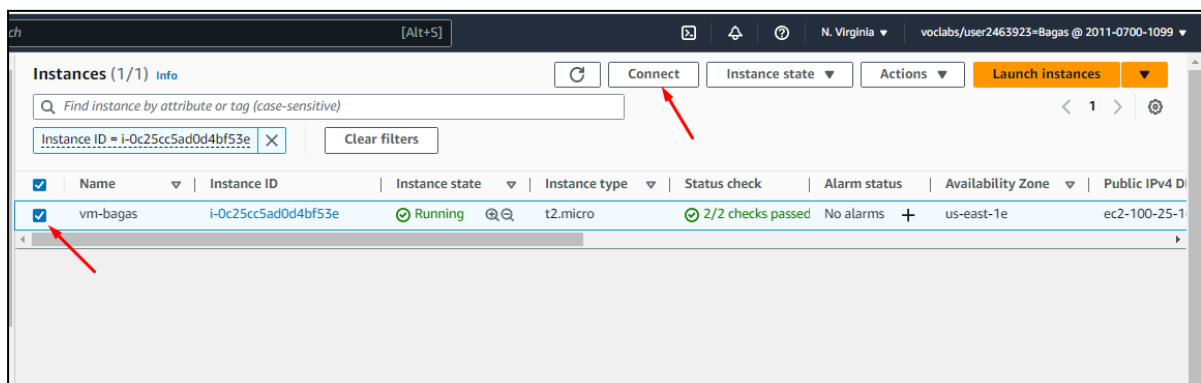

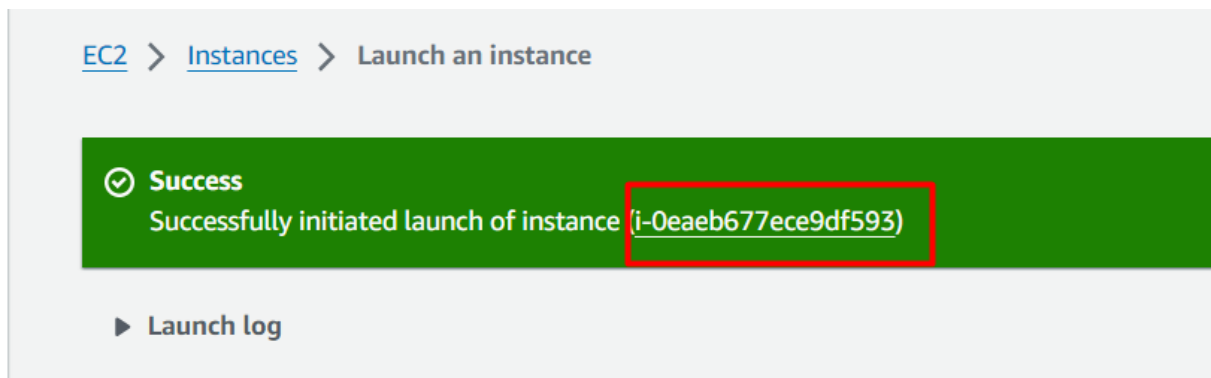

1x 30 GiB gp3 ▼ Root volume (Not encrypted)

[i](#) Free tier eligible customers can get up to 30 GB of EBS General Purpose (SSD) or Magnetic storage [×](#)

12. Klik Launch Instance

13. Klik link instance dan ikuti pada gambar

Connect to instance [Info](#)

Connect to your instance i-0c25cc5ad0d4bf53e (vm-bagas) using any of these options

[EC2 Instance Connect](#) | [Session Manager](#) | [SSH client](#) | [EC2 serial console](#)

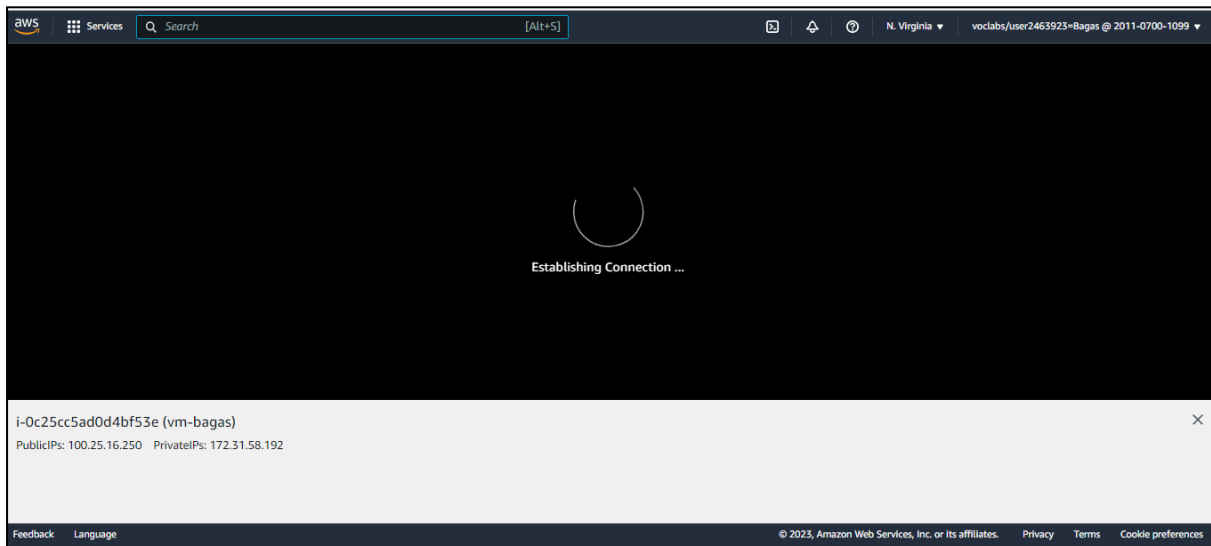

Instance ID
i-0c25cc5ad0d4bf53e (vm-bagas)

Public IP address
100.25.16.250

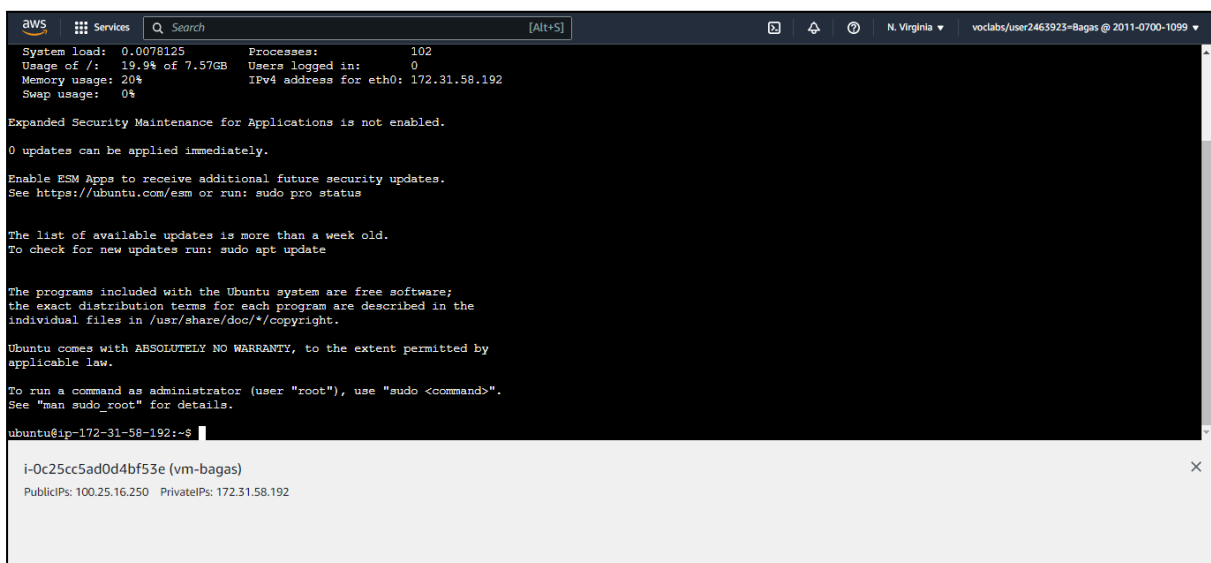

User name
Enter the user name defined in the AMI used to launch the instance. If you didn't define a custom user name, use the default user name, ubuntu.

Note: In most cases, the default user name, ubuntu, is correct. However, read your AMI usage instructions to check if the AMI owner has changed the default AMI user name.

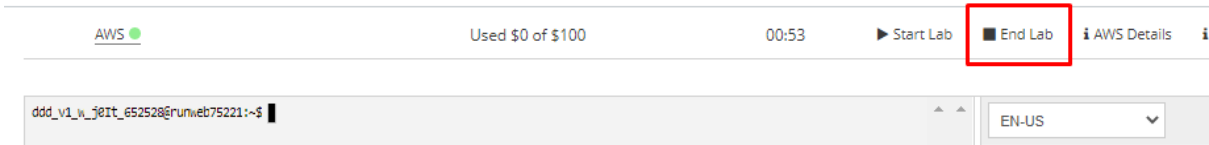

[Cancel](#) [Connect](#)

14. Instance berhasil dijalankan atau artinya virtual machine/server dengan OS Ubuntu berhasil dijalankan dan siap untuk proses praktikum

15. Apabila sudah selesai melakukan praktikum, maka kembali ke awsacademy Learner Lab, kemudian matikan lab dengan klik End Lab, maka virtual server juga akan ikut non aktif

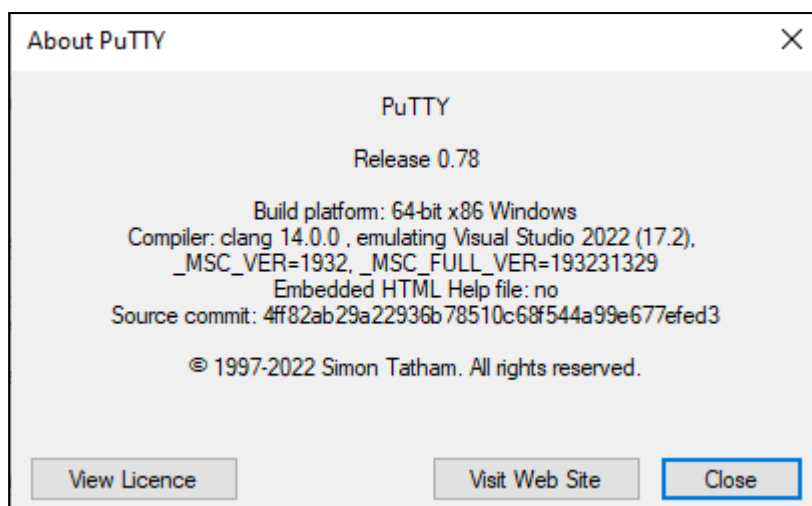

Koneksi Putty ke AWS

1. Apabila belum menginstall putty, dapat di download di

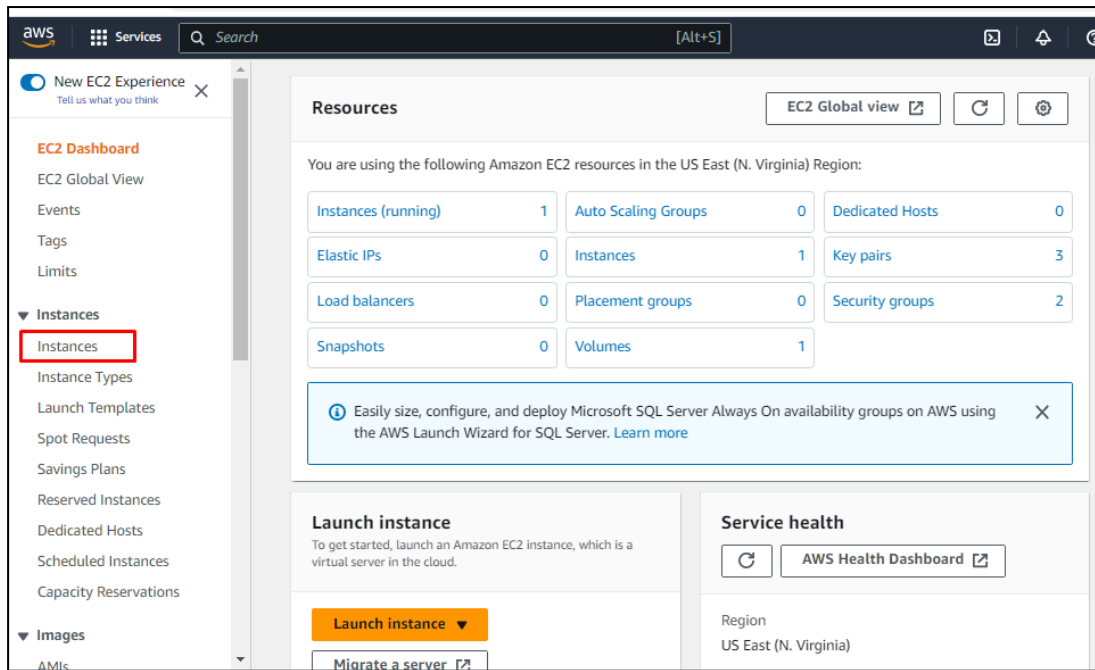

<https://www.chiark.greenend.org.uk/~sgtatham/putty/latest.html>

Jika sudah terinstall putty sebelumnya, maka perlu dicek versinya di menu About.

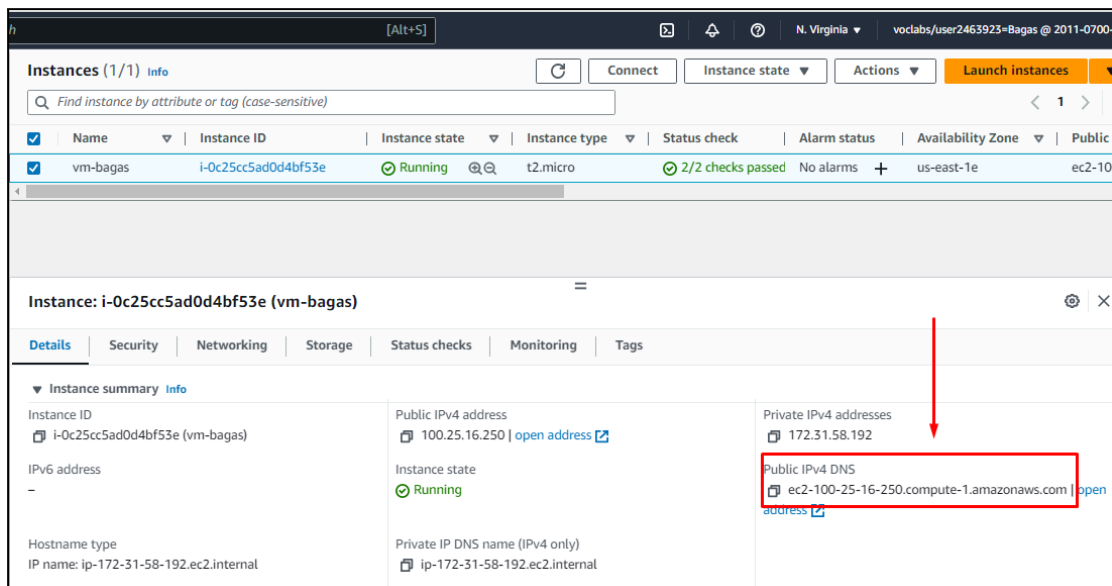

Pastikan versi 0.72 ke atas. Tutorial ini menggunakan versi 0.78

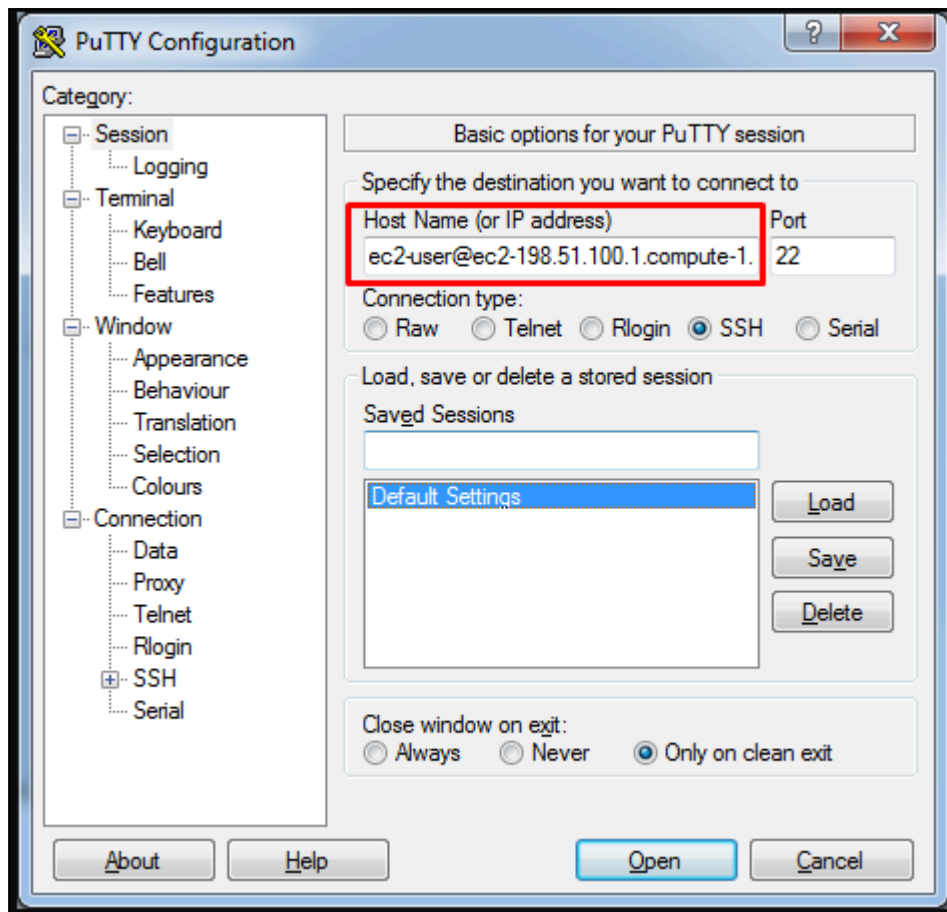

2. Pada menu home AWS, pilih instance

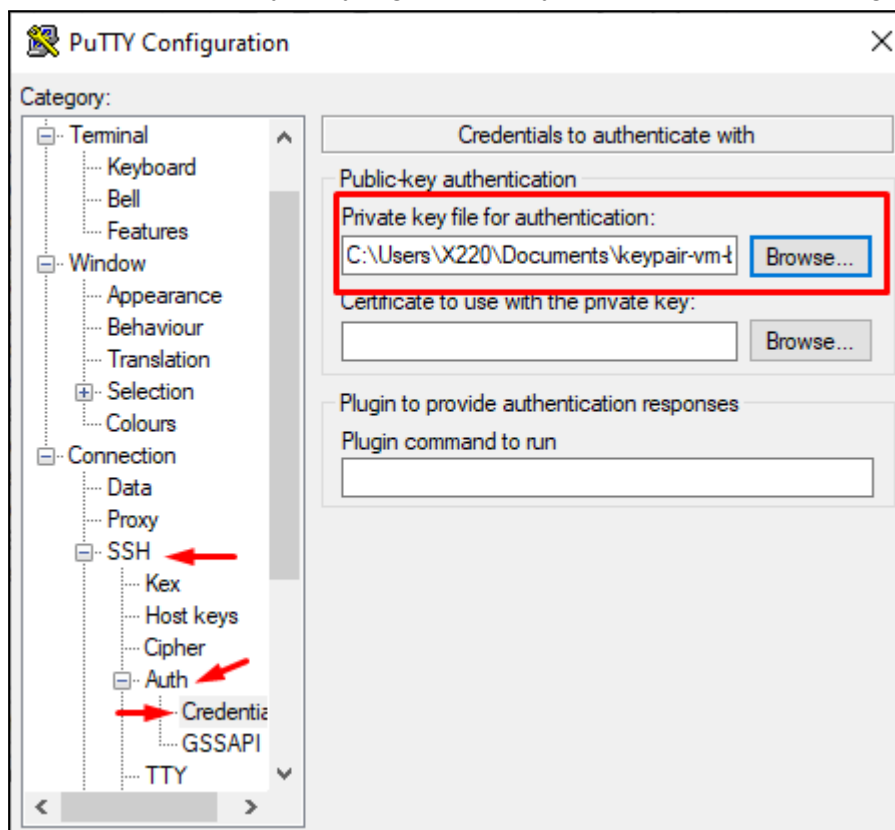

3. Copy IPv4 DNS Public, atau taruh di notepad. nantinya ini yang akan digunakan koneksi di putty

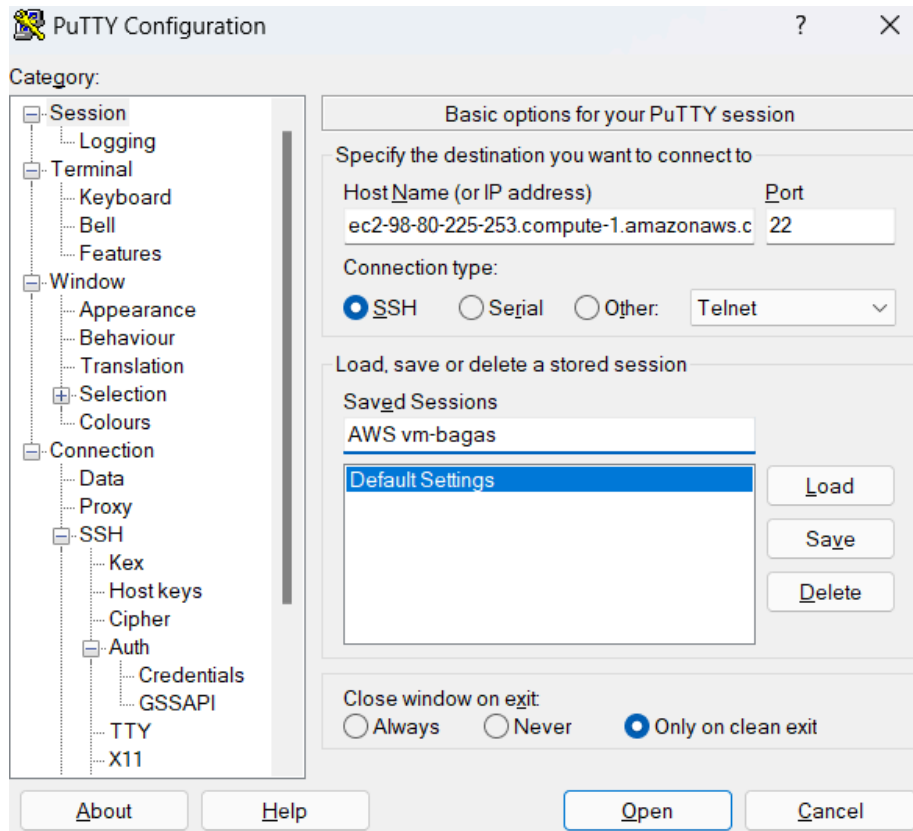

4. Kembali ke putty, kemudian masukkan pada kolom Host Name (or IP Address) dengan ubuntu@Public IPv4 DNS yang telah dicopy tadi. misal :
ubuntu@ec2-100-25-16-250.compute-1.amazonaws.com

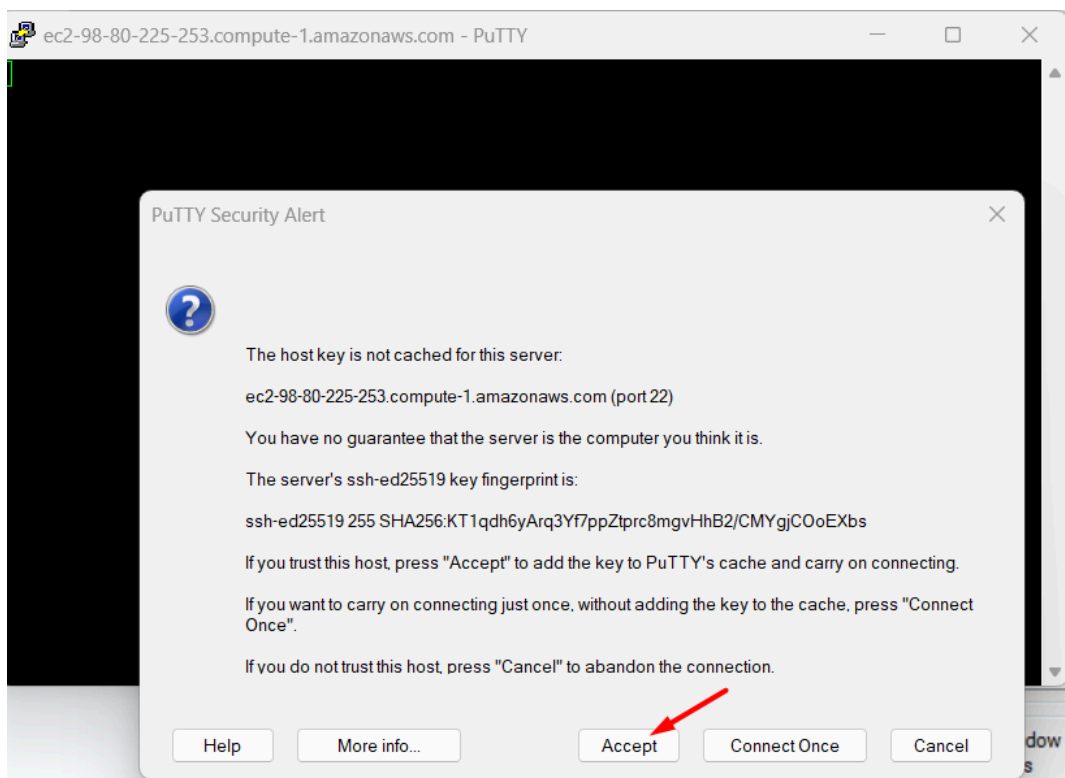

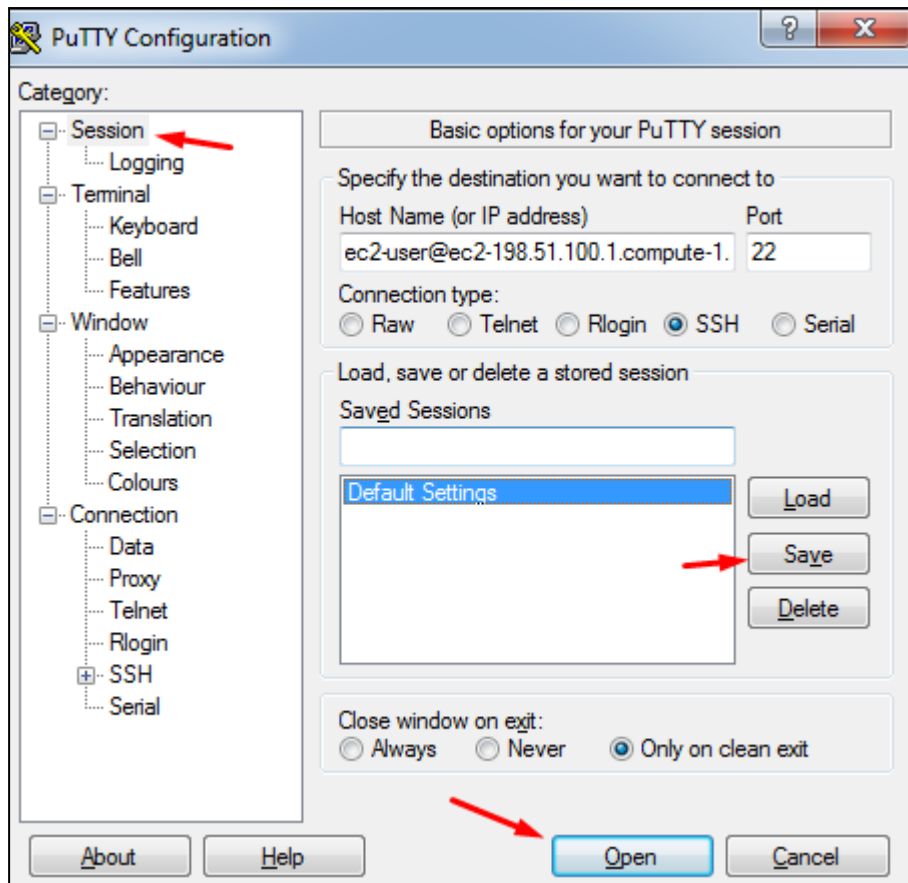

5. Kemudian upload keypair yang sebelumnya sudah dibuat. File dengan ekstensi .ppk

6. Kembali ke Category -> Session dan anda bisa menyimpan terlebih dahulu settingan ini dengan memberi nama pada kolom Saved Session dan klik tombol Save, selanjutnya klik Open

7. Jika berhasil, maka anda akan masuk ke virtual server sama seperti di web AWS pada tutorial sebelumnya
