LISTING PRAKTIKUM STRUKTUR DATA

MODUL 1

TIPE TIPE DATA DALAM JAVA

PRAKTIK

Praktik 1

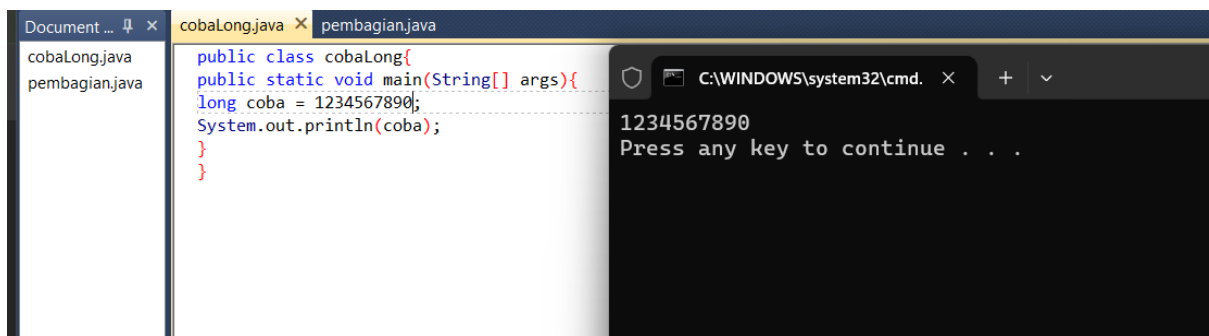

The screenshot shows an IDE with a file named `pembagian.java`. The code defines a class `pembagian` with a `main` method. It sets `banyaknyaApel` to 5 and `jumlahAnak` to 2, then calculates `perolehan` as the integer division of 5 by 2, which is 2. The output in the terminal window is "Masing2 mendapat = 2" followed by "Press any key to continue . . .".

```
public class pembagian{
    public static void main(String[] args){
        int banyaknyaApel = 5;
        int jumlahAnak = 2;
        int perolehan;
        perolehan = banyaknyaApel / jumlahAnak;
        System.out.println("Masing2 mendapat = " + perolehan);
    }
}
```

```
Masing2 mendapat = 2
Press any key to continue . . .
```

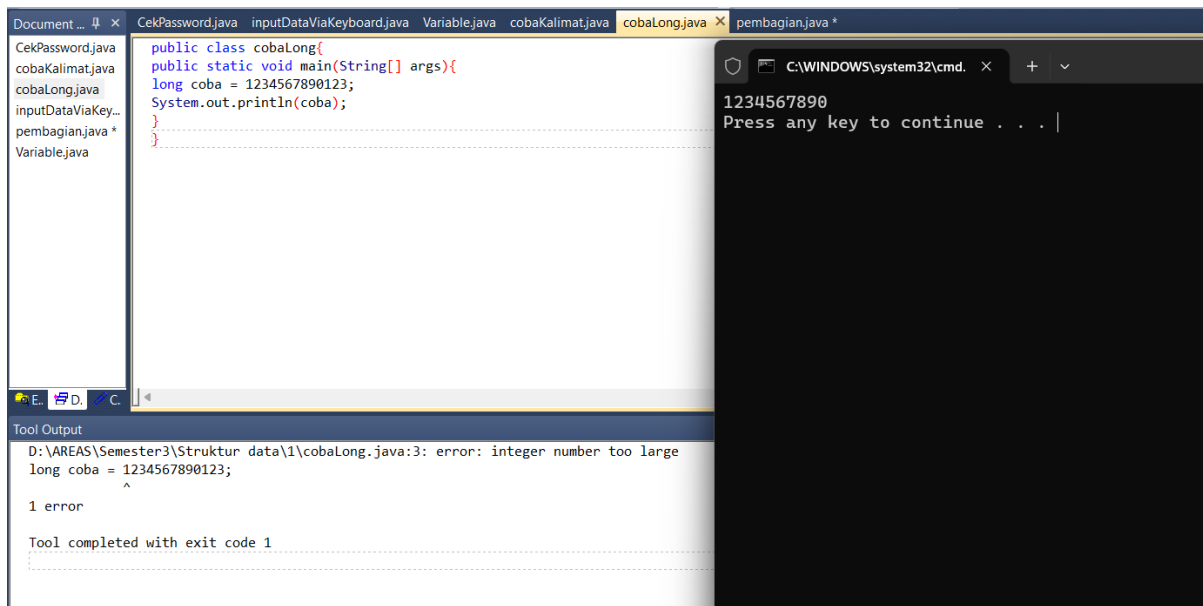

Praktik 2

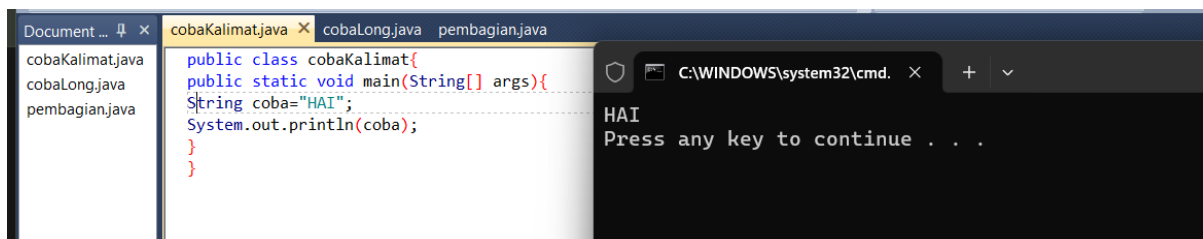

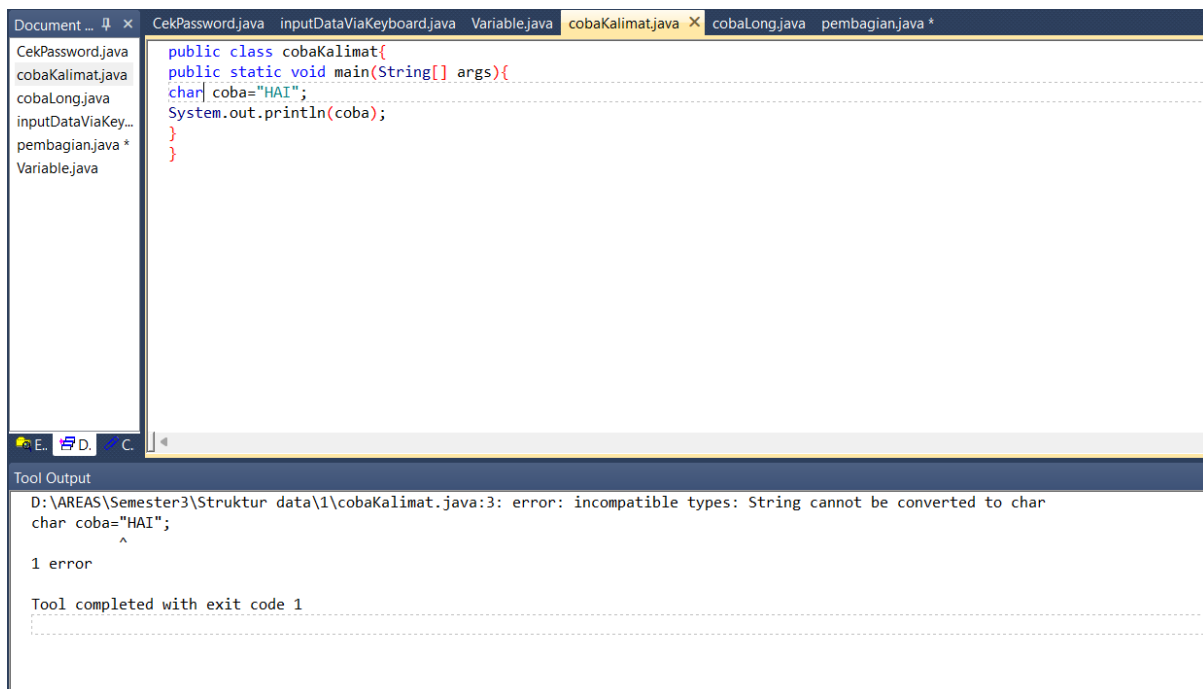

The screenshot shows an IDE with a file named `cobaLong.java`. The code defines a class `cobaLong` with a `main` method. It declares a `long` variable `coba` and assigns it the value 1234567890. The output in the terminal window is "1234567890" followed by "Press any key to continue . . .".

```
public class cobaLong{
    public static void main(String[] args){
        long coba = 1234567890;
        System.out.println(coba);
    }
}
```

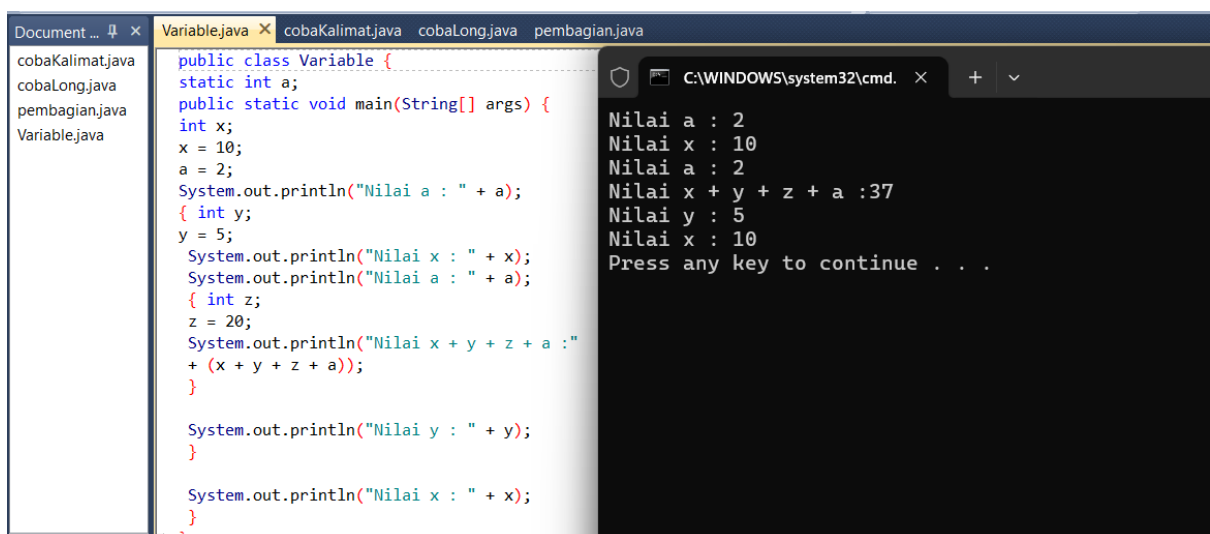

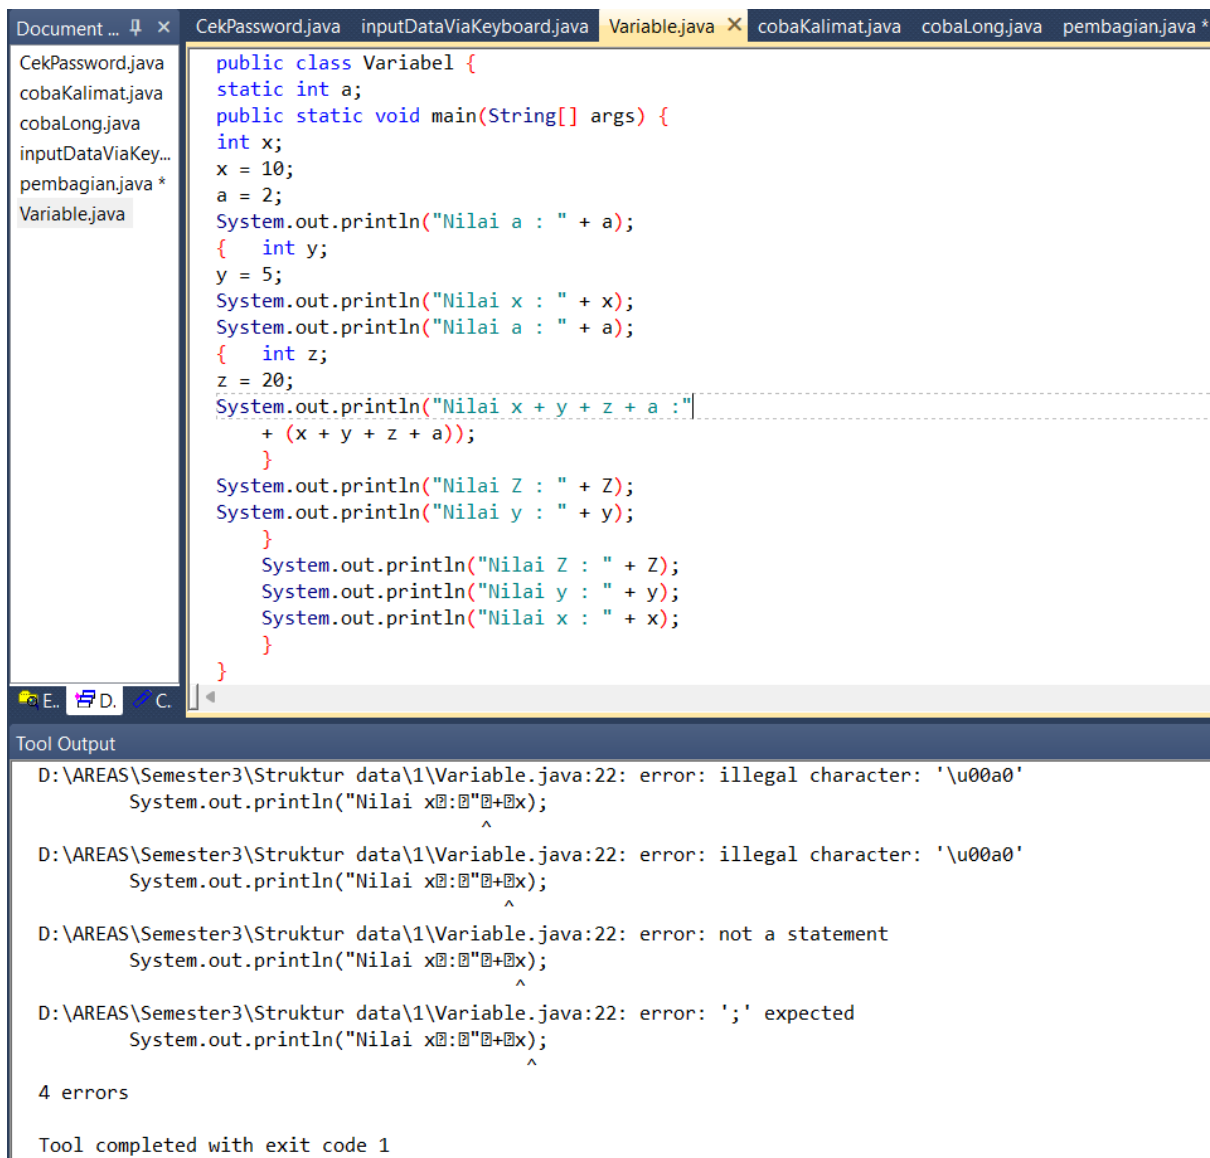

```
1234567890
Press any key to continue . . .
```

```

LATIHAN

Latihan 1

The image displays two screenshots of a Java IDE (IntelliJ IDEA) showing a password checker program. The program is named `CekPassword.java` and is located in the `C:\WINDOWS\system32\cmd.` directory.

First Screenshot: The program is running with the input `akakom`. The output is `wornng get out of here`.

```
import java.util.Scanner;

public class CekPassword {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);

        System.out.print("password nya apa ya: ");
        String password = input.nextLine();

        if (password.equals("AKAKOM")) {
            System.out.println("Yesss you are so sigma ");
        } else {
            System.out.println("wornng get out of here");
        }
    }
}
```

Second Screenshot: The program is running with the input `AKAKOM`. The output is `Yesss you are so sigma`.

```
import java.util.Scanner;

public class CekPassword {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);

        System.out.print("password nya apa ya: ");
        String password = input.nextLine();

        if (password.equals("AKAKOM")) {
            System.out.println("Yesss you are so sigma ");
        } else {
            System.out.println("wornng get out of here");
        }
    }
}
```
